
Sodium Glucose Cotransporter 2 Targeted Library from OTAVA

Screening compounds for **antidiabetic drug discovery**

I would like to offer you our **Sodium Glucose Cotransporter 2 (SGLT2) Targeted Library (687 compounds in total)**. This is a special screening library that contains compounds with predicted SGLT2 inhibitory activity. The compounds have been selected with Bayesian models using a set of known SGLT2 inhibitors. Thus, selected compounds match physical and structural parameters of template inhibitors and contain important molecular fragments, required for SGLT2 binding.

This library comprises drug-like compounds only and provides an excellent basis for Diabetes-associated research and drug development projects.

Find out more...

**All compounds are in stock.
The library is for prompt delivery, cherry-picking is available.**

**See also all our Diabetes
Targeted Libraries**

Feel free to contact me if you are interested to obtain this library or if you need more information.

I am looking forward to your reply.

Best regards,
Andriy Dmytrenko, MBA
Director of Business Development and Marketing
