

Alzheimer's Disease Targeted Polypharmacology Library from OTAVA

Screening compounds for Alzheimer's disease drug discovery

I would like to offer you Alzheimer's Disease (AD) Targeted Polypharmacology Library. This special set contains 715 compounds selected to interact simultaneously with two AD drug targets - Acetylcholinesterase and Beta-secretase 1 and with physicochemical properties preferable for BBB penetration. The library has been carefully designed with combined approach that included pharmacophore modeling, molecular docking and Bayesian modeling. General scheme is presented below:

This library contains drug-like compounds and provides an excellent basis for drug discovery projects related with Alzheimer's disease.
